

• Characteristics

– Excellent Capability For Protection of Momentary Power Defects

PVS offers filtering and compensation effect of all input power. It allows your production line to free every momentary power defects such as voltage sag, surge, harmonic, transient, and noise, etc..

– High Quality Power Supply

PVS always supplies ideal sine wave with constant voltage and accurate frequency. It offers high quality power with optimal condition to your production line.

– Maintenance Free

PVS uses not batteries, but ultracapacitors. Therefore, the problems such as maintenance cost, waste, and pollution are eliminated.

• Input/Output Waveform

PVS provides ideal sine wave with constant voltage and accurate frequency regardless of momentary interruption of input sine wave. It shows that PVS offers high quality power supply without any power defects to your manufacturing line.
